

KASAM SAI VENKATA SIDDARDHA

+91 7995082399 | siddukasam28@gmail.com | SRIKAKULAM | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

Key Skills

Programming Languages: SQL(Structured Query Language), python, C++
Machine Learning tools: Scikit-learn, Pytorch, CNN, ResNet, XGBoost, Optuna
GenAI and NLP: NLTK, Spacy, LangChain, LangGraph, RAG, ChromaDB
MLOps and Cloud Tools: Docker, Github Actions, FastAPI, Streamlit
Visualization Tools: Pandas, Numpy, Seaborn, Matplotlib

Professional Experience

Atliq Technologies	Remote
Data Science (Internship)	Dec 2024 - Dec 2024
- Developed a beverage price prediction model by processing 30,010 consumer records, significantly enhancing data integrity through rigorous outlier removal, missing value imputation, and categorical standardization. - Architected advanced features, including a Zone Affluence Index and a 3-level Brand Awareness Score, to capture complex consumer behavior patterns and improve the transparency of model interpretability. - Increased predictive accuracy from 89% to 93% by optimizing XGBoost with RandomizedSearchCV, achieving a stable 92% F1-score for robust, real-time business forecasting.	

Skills: Python, Scikit-learn, Numpy, Pandas, matplotlib

Projects

ERFOLG - Generative AI Project Link	
[RAG / Agentic AI / Python / langchain / LangGraph]	Jan 2026 - Present
- Launched a multi-agent ecosystem using LangGraph to coordinate 6 specialized agents for autonomous job discovery and application management. - Implemented a RAG-based semantic search engine with Pinecone, optimizing profile-to-job matching relevance for large-scale datasets - Built a voice-enabled interview agent and a dynamic curriculum engine using DAGs to synthesize personalized, step-by-step career strategies.	
End to End MLOps Network Security Project - MLOps Project Link	
[Python / pandas / scikit-learn / numpy / MongoDB]	Oct 2025 - Oct 2025
- Constructed an automated MLOps pipeline for data ingestion via MongoDB, schema validation, and artifact versioning on AWS S3. - Designed a full CI/CD workflow with GitHub Actions to containerize a FastAPI service into Docker images for AWS ECR. - Deployed a continuous delivery system using self-hosted EC2 runners to automatically pull and redeploy updated containers.	
Car Damage Prediction - Image Processing Project Link	
[python / pytorch / CNN]	Mar 2025 - Mar 2025
- Trained CNN and ResNet architectures on a multi-class dataset to automate the identification of six distinct vehicle damage categories. - Optimized model performance using Optuna hyperparameter tuning and transfer learning, achieving an 82% accuracy rate on limited data. - Delivered a real-time vehicle damage classification tool via a Streamlit web app, reducing manual inspection time from 30 minutes to under 5 minutes.	
Credit Risk Modelling - Banking Project Link	
[python / pandas / numpy / matplotlib / scikit-learn]	Oct 2024 - Oct 2024
- Developed a robust preprocessing pipeline including data splitting to prevent leakage, MinMax scaling, and multicollinearity removal using Variance Inflation Factor (VIF) analysis. - Balanced high-dimensional datasets using SMOTE Tomek and conducted comparative model training across Logistic Regression, XGBoost, and Random Forest on 50,000 samples. - Implemented an interpretable real-time scoring tool via Streamlit, achieving 93% accuracy and a Kolmogorov-Smirnov (KS) statistic > 0.4 to ensure reliable risk assessment.	

Certifications

- Machine Learning - Codebasics**
Issued on: Dec 2024 [Certification Link](#)

Education

Amrita Vishwa Vidyapeetham	Tamil Nadu
Btech - Computer Science Engineering	Aug 2023 - Present
GPA - 8.52
